Warming up and developing the globe is the motto of this materialistic world. Nature has its own way's of living. Introduction of science and development of technology became a serious threat to this nature. One among those is the increment of temperature in envelop the earth. The main activities of civilized beings itself is becoming the effect to them and the remedies to this are to be brought out through these civilians it self. This is the one where a citizen of this environment deals with how to preserve the nature by maintaining it's beauty and using technology to decrease the serious threat to decrease the temperature and protect the envelop from being burnt . . Unless we take steps now to curb global warming, our way of life, our planet, and our children are all in grave danger. There is hope. Each us can make simple decisions that will reduce global warming pollutionTo protect the health and economic well-being of current and future generations, we must reduce our emissions of heat-trapping gases by using the technology, know-how, and practical solutions already at our disposal.

This poster mainly throws light on how a citizen should react towards this issue, and how to implement the technology in preventing the effect and protect the earth from the necessary evil that is increasing at a faster rate i.e. "GLOBAL WARMING".
